State of the art…

High gas fees

Lack of Utility

Risky

Short term focus

Unrealistic roadmaps

Anonymous teams

Short-lived demand

→ A lot of money wasted on false promises

http://polygoonz.tilda.ws/

The Polygoonz solution...

Polygon based = no gas wars
$GOONZ token = incentive to HODL
Polygoonz game = competitive collecting
Community driven lore = rewarding participation

The POLYGOONZ

Polygoonz are 8883 individually unique humble farmers living (and fighting) on the Polygon Mainnet as ERC721 tokens.

8000 algorithmically randomized collectible NFTs comprised of over 300 possible traits in 12 categories.

880 handmade Ultra Goonz, obtainable only by purchase with the $GOONZ ERC20 token.

2 Golden Goonz, and 1 Galaxy Goon

The $GOONZ token

$GOONZ will be deployed alongside the main collection, and can only be acquired by staking your collected Polygoonz NFTs.

In addition to a base hashrate per NFT staked, each goon will have a chance to have (as an invisitble trait) a 'yield boost' of 0 to 15%.

Some Goonz are just better farmers :P

Roadmap? Where we're going, we don't need roadmaps.

There will be a number of **collection release milestones** to reward collectors along the way (on website: http://polygoonz.tilda.ws/)

100% sold, marks the starting point for our real plans. The collectors of the Polygoonz will be rewarded as our vision becomes reality. We will reveal more as time goes on.
Expect it to be a fun, exciting experience for the community.

Phase 1 (After all Goonz are sold)

A comic-book series, revealing the true nature of the goonz, and the history of their endless war, with several aspects to be influenced by the actions of the goonz community; published physically, with collectors editions NFTs airdropped to goonz holders. Each physical will also include the ability to redeem a digital twin, which will be unremarkable when compared to the collector's editions.

Phase 2

A territory control game, similar to Risk, to redistribute all $GOONZ from returned through sales of the Ultra Goonz. The goonz will reveal themselves as members of one of four warring factions, and will need to be staked to conquer a territory. (details to be published in the whitepaper)

Phase 3

A Metaverse world, with primary land purchases restricted to goon holders, and sold for the $GOONZ token.

$GOONZ revenue to be redistributed through new staking pools to segway into Goonz Governance.

A DAO to ultimately decide the future of the Gooniverse.

Additional Goontility Concepts

INTEREST-GENERATING GOONZ Inspired by Aavegotchi, Charged Particles, Emblem Vaults, Etc. which enable an NFT to also function as a wallet, some including automatic deposit to Aave to become interest generating NFTs. In the case of CP, additional NFTs (Leptons) can be purchased and will increase the interest rate on Aave deposits.

GUARDIAN GOONZ Inspired by Method Finance and Visor Finance, proponents of the NFT Smart Vault protocol; which allows for programmable liquidity management and reinvestment without relinquishing control of the assets to a smart contract that could potentially be exploited or rug-pulled.

GOONZ FOR GAINZ Considering the ability to house a functioning wallet within an NFT, combined with a basic knowledge of Chain Link Keeper and Open Zeppelin Defender allowing proxy wallets to automate smart contract interactions and/or the protocols used by platforms like autofarm/swamp finance/etc. to deploy auto-compounding vaults, it could be assumed that an auto-compounding vault, or an automated arbitreur, or potentially more advanced strategies could also be housed in an NFT.

Thank you for your time.
