Introduction

- Our team is based with Digital Marketing Professionals & Chatbots Developers:
 - Winners of the fAIr LAC 2021, Guadalajara Jalisco.
 - Winners of the CoinParty Hackathon 2021.

Track of choice: TRACK #2 - NFT Payments

Project

The challenge: The most popular EVM compatible crypto wallet, has only surpassed 5 million users, representing 0.06% of the world population. Hence, the vast majority of humanity has yet to get access to most of the available NFTs. There is currently a need for solutions to simplify the ways NFTs are bought and sold, for people who are not familiar with on-chain wallets.

Opportunities: As of January 2021 there were 4.66 billion active internet users worldwide - 59.5% of the global population, and it's a global an inclusive way to provide access to education and docs about Circle Payments APIs & Services.

There's no going forward for NFTs without Users, Developers & Marketplaces Education!

What it does? We help Marketplaces & E-commerce interested in adopting NFT payments in their solutions, with the step-by-step to integrate Circle Payments APIs & Services, through a web chatbot in Line.

Technology & Tech Stack

We use the Circle API Docs: <https://developers.circle.com/docs/circle-payments-api-quickstart>
and integrate it with Jovo API: <https://www.jovo.tech/docs/>
and Line Services: <https://developers.line.biz/en/>

Scalability

We plan to scale the project by adding more technical examples for the integrations of:

- Payments API
- -Payouts API
- -Accounts API
