Introduction

Meet Chantel Daniel, Founder and CEO of The Good Coffee Project, or TGCP for short.

I have always had a keen interest in finance and spent the early part of my career in stuffy offices, where I was very uncomfortable and treated poorly. Without a means of income to look after myself when I no longer was wanted at work, I became homeless, depressed and unsure of myself. My life changed when I turned to coffee to build a business only to learn that I was involved in a trade dominated by forced labour and a colonial past that hadn't changed for centuries.

My heart for humanity has grown so much since starting in coffee 3 years ago that I have put my own story to one side to getting a solution for these farmers.

Blockchain has been a life-changer for so many communities around the world and I am here to learn how we can apply this technology practically, in coffee. I find that I can now combine my passion to find a solution with the practical use of my accounting knowledge for the benefit of the community I am building through TGCP, as a social impact entrepreneur.

Meet Godwin Jimmy, CTO of The Good Coffee Project.

Track of choice

The name of the track we are competing for is the 'Circle NFT Payment Solution'.

We have completed the application for this track to include the following elements:

- 2 min Video
- 6 page Slide Deck on specified template
- Prototype

Project

To facilitate the payment for coffee vendors and coffee lovers via crypto we will be build a crypto wallet and nft marketplace using the circle api's.

the wallet system will be design to facilitate and fast track p2p transactions/nft exchange between coffee lovers, coffee vendors and users, coffee vendors and farmers, between coffee vendors and suppliers.

The wallet system can be used to receive and send crypto globally and used as a means to store crypto currency

with the use of USDC vendors, supplier and farmers can be safe from deflation on their currency as the only need to exchange this tokens to fiat when they need it.

the good coffee wallet will be the first crypto wallet dedicated to the coffee community specifically for their needs.

Link to the prototype: [Prototype](#)

Technology & Tech Stack

We will be using flutter to build the mobile application. We will be using Node.js to build the backend and consumer all the api's for the mobile application.

We will be using the circle api for all payment structure and systems.

Scalability

With a large coffee community we are sure of getting this mobile application into the hands of a minimum of 1 thousand users, including vendors, farmers, supplier, and users.

We have a community of active coffee lovers, suppliers and vendors.
