| The Problem

Dealing with NFT's is expensive!

And not everyone has Crypto in their wallets

Metamask, the most famous crypto wallet, has recently crossed 5 Mil users, and only a handful of them possess actual crypto

If an ordinary user just wants to experience the world of NFT's, he'd have to pay a hefty amount in gas fee, just to get his NFT's listed

While Lazy Minting comes to the rescue for sellers, allowing them to create and list their NFT's for free, buyers still need to have crypto in their wallets

| The Solution

What if we could completely eliminate the need to deal with crypto, while also minimizing Minting costs, thus opening the world of NFT's to users beyond the crypto realm?

| The Circle Magic

Thanks to Circle, we can finally help onboard users that are interested in the underlying value of NFT's, yet have a limited knowledge of cryptocurrencies. Using Circle, our users can now buy NFT's using fiat!

| The Solution

List your NFT's for free by the help of Lazy Minting

Buy NFT's using your traditional bank cards, made possible by  CIRCLE

The NFT creators can opt to receive their profits in either crypto or fiat, thus encouraging all kinds of artists

Scalability

The NFT market has surged by almost 8x since 2020 to reach an estimated value of almost \$ 3,000,000,000.

At an average only 20000 to 40000 users deal with NFT's in a given month.

In a survey, 40% people knew about NFT's in one way or the other, 15% were interested in buying them yet only 4% had crypto holdings.

This can be attributed to the lack of on-chain users, something that our solution will help solving.

Us and IPFS

There was just one road block, we cannot host the signatures directly on a centralized database, so we use IPFS for the job. Now whenever we create a signature, the JSON file will get appended to IPFS and that's where we will fetch our data.
