

ELIMBO

NFT Vision Hack Submission

A Scalable NFT Art project

THE ARTIST

O'Plérou is an Ivorian creative explorer working in the fields of art, design & technology, currently based in Marrakesh (Morocco).

Avid learner and aspiring polymath, his creative practice consists in projects merging Culture, Communities, Digital lives, Self-expression, Crypto, Psychology, Internet & more.

He is the creator of Zouzoukwa, a project about the digital representation of African cultures through emojis, coming soon on the blockchain.

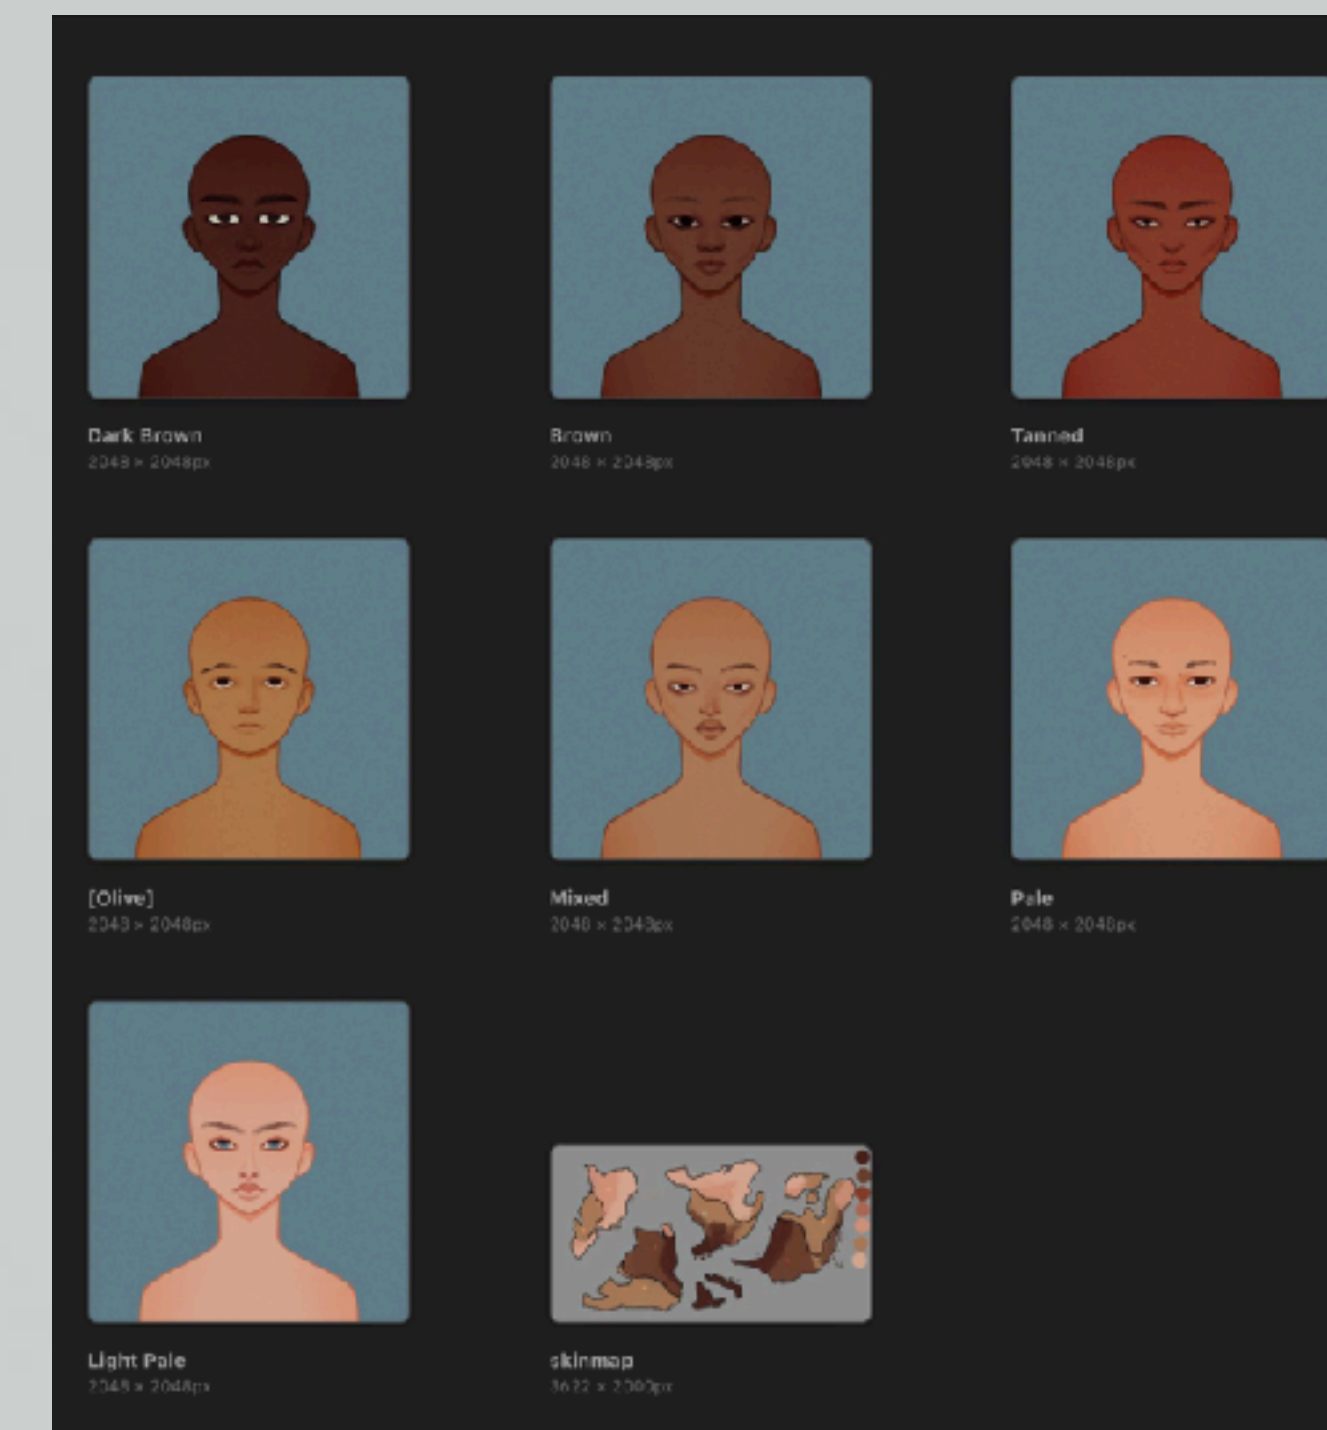

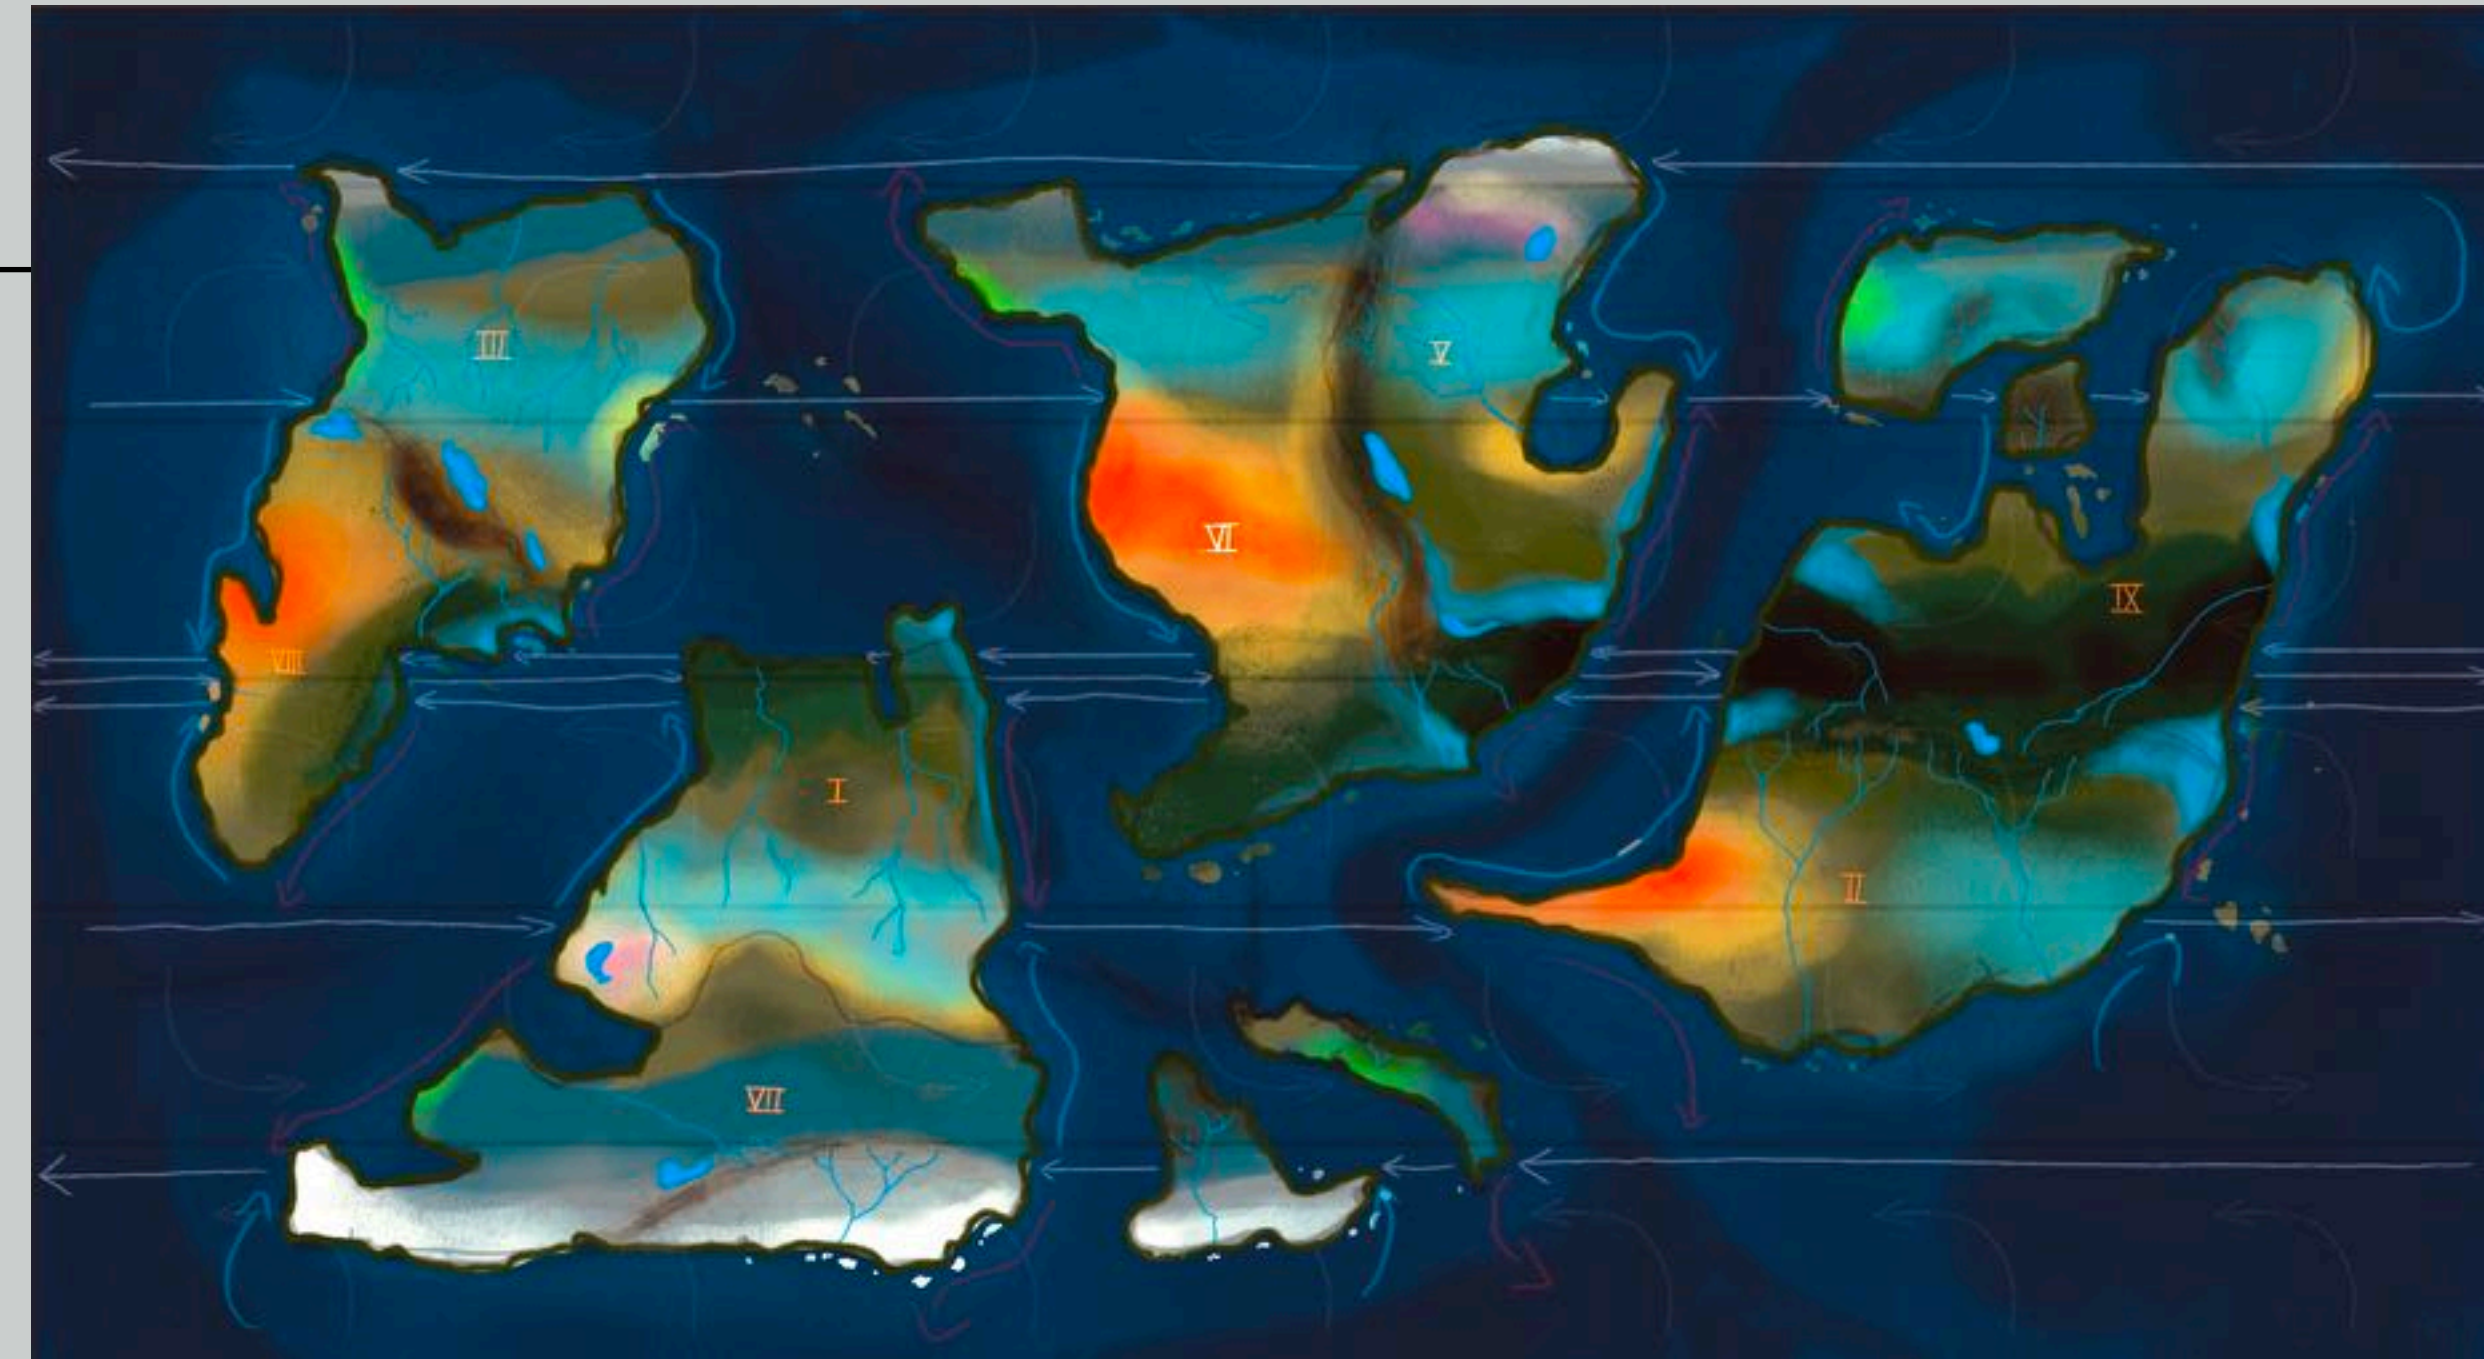

THE PROJECT

Elimbo is a generative NFT project on the Ethereum blockchain consisting in 9,999 unique collectible characters, and a universe around them.

With dozens of traits created according to 9 distinct cultures inspired by a personality system, it's the foundation of a new kind of fiction Universe creation, made in collaboration with a community of early adopters.

As a crypto native project, Elimbo will use the power of decentralization and social tokens to reward the contributors and design great incentives to create an overgrowing project that could become a universe of Games, Books & even Movies.

SCALABILITY

The secret sauce of Elimbo is the personality System behind it, the Enneagram.

Creating Worlds divided in Factions (Divergent) or Groups (Harry Potter) always facilitate the identification process with people, because humans have a social need to belong.

If IRL we don't always meet people matching with us, online communities allow people to find likeminded users and feel less alone, and create strong bonds with the project.

On the artistic side, the project is highly scalable because of the amount of research, work and possibilities of traits available, making each of the characters unique and special.
